

Orchid Electronics Modular Microphone Splitter

- One microphone input with one direct output and one transformer isolated output
- Isolated output has a semi recessed toggle switch to enable the pin 1 earth to be lifted if required to prevent hum loop formation
- Phantom power will pass from the direct output to the microphone input to ensure correct operation of capacitor microphones and DI Boxes
- Modular design enables great flexibility – a 2U high rack can house up to 8 individual splitter units. Stage boxes and wall mounted boxes are also available, with blank panels being available if a full complement of splitters is not needed
- Module panel size is 75 x 54.75mm and is 30mm deep. Dimensioned drawing available on request to enable custom fixing
- High quality components employed for long and reliable service life – Neutrik connectors, specially wound high performance transformer and close tolerance passive components
